Minimum bid accepted is \$5000 *Traverse Electric Co-op reserves the right to accept or reject any and all bids*.

# ENERGY EFFICIENCY

A well-designed landscape can add beauty to your home and reduce home heating and cooling costs. Plant deciduous trees with high, spreading crowns to the south of your home to block sunlight in the summer and reduce the need for air conditioning. Deciduous trees lose their leaves in the winter, allowing sunlight to warm your home.

Plant evergreen trees and shrubs with low crowns to block winter winds. Dense evergreen trees and shrubs planted to the north and northwest are the most common type of windbreak and can help lower energy used for home heating. Source: energy.gov

As you prepare for planting season, don't forget to plan for safety. Keep these safety tips in mind:

### TRAIN OTHERS

Train anyone working on your farm, including family members and seasonal workers, about electrical hazards.

### SAFETY FIRST

Have daily meetings to review the day's work. Know and review where the power lines are, the clearance required and the proper position of extensions as they are transported.

### WAIT TO UNFOLD

Remind workers to fold or unfold extensions well into the field, not close to the field's edge where power lines are typically located.

### USE A SPOTTER

When working in the vicinity of power lines, always have a spotter on the ground who can direct you away from power lines or poles if you are getting too close.

### DO NOT EXIT YOUR CAB

If your machinery or truck makes contact with a power line, pole or guy wire, you could become electricity's path to ground and become electrocuted if you step out of the cab.

### CALL 9-1-1

Call 9-1-1 to have your electric utility dispatched to deenergize the power source. Only exit the cab if your equipment is on fire. If that happens, make a solid jump out and hop away with your feet together as far as you can.
